Intro

I am a software developer with 10 years of experience, having worked at multiple startup - including one I co-founded - as well as larger companies. While my primary focus has been frontend development, I have also worked on backend systems when needed. Additionally, I spent several years doing UX/UI design.

I am looking for a medior/senior role in a team of developers where I can grow by collaborating with other engineers. I enjoy working on ethical products that are designed with a strong focus on user needs.

I bring a generalist skill set gained from working on multiple products from initial design iterations through release and maintenance. My strength lies in the front-of-the-frontend, with a strong attention to detail in translating UI design into implementation.

Skillset

Technologies

- Typescript, React, Redux, Svelte, Next, Nest, Git, Storybook

Practices

- Test driven development, Code review, Documentation writing, Atomic Git commits

Occupation

`2023–now` **Web Game developer @ Czech Television**

- Designing and developing web games and other interactive products for children
- Frontend & backend development, UX design

`2022–2023` **Web developer @ Datamole s.r.o.**

- Frontend & backend development
- UI & Application architecture design

`2019–2022` **UX engineer @ Sentica s.r.o.**

- Frontend development
- Data visualisation
- Application architecture & UX/UI design

`2017–2019` **React developer @ Berry Cloud**

- Frontend development & UI design

`2016–2017` **Python developer @ Querity s.r.o.**

- Data wrangling & Data visualisation

Education

2015–2018 **Faculty of Electrical Engineering, Czech Technical University in Prague**

- Software engineering and technologies
